

IMPORTANT GUIDELINES

HOW TO ENSURE THE BEST PERFORMANCE FROM ELIA UNBREAKABLE STAINLESS STEEL VACUUM JUG

*(for your safety and optimum performance,
please read this guide carefully before use)*

We appreciate your decision to purchase an Elia quality product. Please read the important guidelines below and overleaf. By being mindful of these guidelines, we are confident that your Elia product will give you top performance and optimum satisfaction for years to come. Thank you.

IMPORTANT NOTICE

- This product is for table-top use only. In order to avoid spillage, please keep upright at all times.
- Do not store or use when in any mode of travelling, as this product is only for table-top purposes.
- For your safety, remember that your Elia Unbreakable Stainless Steel Vacuum Jug maintains a very high thermal efficiency. Never forget that a hot beverage is stored. Only knowledgeable persons should handle this product. Keep away from children.

HOW TO USE

- We recommend that before using, pre-fill with warm water for hot beverages or cold water for cold beverages. This ensures the very best performance from your Elia product and optimises thermal retention.
- Always make certain you only fill to 3 centimetres below the rim, for both hot and cold beverages, as this enables the stopper/lid to be safely secured and avoids spillage.
- Unscrew the stopper or open the lid when not in use, for this will aid quick drying and allow air circulation.
- Your Elia Unbreakable Stainless Steel Vacuum Jug is suitable for many occasions and for hot or cold beverages. Ice cubes may be inserted with no fear of breakage.

HOW TO CLEAN

- Thoroughly rinse your Elia product before use and with washing-up liquid after use. Make sure all former contents are properly removed. After the product is thoroughly cleaned, leave to drain.
- Always clean the exterior shell with a warm, soft damp cloth and wipe dry.
- To remove stubborn stains from the inner unbreakable stainless steel container, insert one dessert spoon measure of bicarbonate of soda and fill with hot water and leave overnight. Always rinse several times after this operation, making absolutely sure the stainless steel container is clean.
- Do not use a wire brush or pot scourer, for these will damage the stainless steel inner container and outer shell, which may cause an air leak to the vacuum compartment.
- For your safety and health, do not clean with chemical cleaners or detergents, other than mentioned herein.
- Do not put your Elia product in a dishwasher or soak for prolonged periods.

IMPORTANT PRECAUTIONS!

- Always use your Elia product with great care. Whilst the vacuum filled double lined stainless steel inner container is unbreakable, dropping or giving the outer shell a hard knock will risk denting the outer shell.
- Always pour the contents into a cup or vessel. Do not drink directly from the product. This will avoid dangerous scalding from hot drinks. Do not place products filled with hot beverages in windy or draughty places, for this will avoid dangerous spillage.
- Always store your Elia Unbreakable Stainless Steel Vacuum Flask Jug upright in a safe place and keep away from children or those inexperienced to handle safely.
- Do not fill your Elia product with carbonated drinks of any kind. This will avoid seepage through the stopper.
- Do not fill with warm milk products, so as to avoid possible bacterial growth, which generally applies to warm milk. However, this does not apply to hot or cold milk.
- Do not place on hot surfaces or attempt to heat contents from the exterior; such as ovens, microwaves or on a hot plate.
- Do not attempt to cool contents by placing in a refrigerator, freezer or similar, for this will achieve nothing as the inner container is vacuum-filled and therefore thermally resistant.
- Your Elia product is specifically designed for table-top use. We do not recommend this product for other than table-top usage only. Please refer to the IMPORTANCE NOTICE overleaf.
- For your safety, remember that the Elia Unbreakable Stainless Steel Vacuum Flask Jug maintains a very high thermal efficiency with hot beverages. Never forget that a hot beverage is stored.
- This product is not designed for storing food and is for beverage use only.

Every Elia quality product, from individual parts to the finished product and throughout the fully automated processes, undergoes a comprehensive series of stringent quality checks to ensure efficient and effective use and long service life for you.
